

Profit Clarity

Bring product costs, fees and trading results into one clearer picture.

Who it fits

Shopify app operators, ecommerce agencies and software providers serving merchants who want clearer margin reporting.

The commercial opportunity

Help a merchant understand how recorded costs affect order and trading-period margins.

Explore a software asset acquisition or defined licence for the scheduled application and workflows.

Explore the workflow

- A source-backed overview of the calculation engine, cost imports and Shopify workflow components.
- Request a focused review of the cost model and intended merchant use case.

Define what transfers

- Scheduled profit-calculation, import and reporting application components.
- Specified Shopify connection components, interface and supporting documentation.
- Defined application or module rights matched to the buyer's intended product.

Agree the handover

A defined implementation baseline and calculation walkthrough, with integration and support responsibilities bounded in the agreement.

Choose whether the full application or a calculation module best fits your customers. Agree data sources, estimation rules and platform requirements as part of the package.

Discuss Profit Clarity for your market

Tell us which customers you serve and the workflow you would like to explore.
