

SatCart

Give Bitcoin buyers a clear way to put an offer in front of a merchant.

Who it fits

Bitcoin payment providers, merchant networks and commerce operators with an existing customer or merchant audience.

The commercial opportunity

Connect buyer intent with a merchant's own payment route through an organised offer and acceptance journey.

Explore a software asset acquisition or defined licence for the scheduled application and workflows.

Explore the workflow

- A source-backed overview of basket preparation, offer records and merchant acceptance.
- Request a focused review around your merchant network and payment route.

Define what transfers

- Scheduled basket, offer, merchant-acceptance and payment-handoff application components.
- Specified request data schema, interface and operating documentation.
- Defined software rights and an agreed setup for the buyer's merchant model.

Agree the handover

A defined application and service-configuration walkthrough, with fixed transition support and clear ongoing provider responsibilities.

SatCart's scope is non-custodial. The merchant retains payment, fulfilment and refund responsibilities; a payment handoff is distinct from confirmed settlement.

Discuss SatCart for your market
